Contractor shall transfer/lower all reusable materials, and replace and relocate all unusable materials that are/were presently/previously attached to the top 12 feet of this power-pole structure, to a location approximately 12 feet below where they presently exist or existed. Contractor shall replace river crossing's downed powerline.
2. Left Bank Power-pole Structure Work (Reference attached Drawing #2 for details)  
The basic/general scope of work for this bank is to move/relocate the existing three(3) 10KVA (possibly 15KVA), 7KV<sub>L-N</sub>-277V<sub>L-N</sub>, single-phase, wye-connected, pole-mounted distribution transformers, with their associated cutouts, and lightning arresters, to a lower location on the pole that will be approximately 25 feet above ground level. Lowering the transformers and their associated components will make them accessible from the ground when using a long hotstick.

#### D. Detailed Scope of Work:

Contractor is responsible for supplying all materials, equipment, and labor necessary to complete the following work.

1. Right Bank Power-pole Structure Repair Work (Reference attached Drawing #1). The scope of work is to shorten/lower the top of this structure by approximately 12 feet in height. The Contractor shall:
  - a. Obtain a work safety clearance on the powerline from NVEC.
  - b. Provide (furnish and install) all materials needed to complete this work (Reference Bill of Material List).  
NOTE: The Contractor shall obtain prior CJD POC approval for replacement of any unlisted material deemed unusable by the Contractor, and that is not listed in the Government's Bill of Materials.
  - c. Install two new pole crossarms, 6"w x 10"h x 34'long, of high-grade structural timber, one crossarm on each side of poles, at a point approximately 12 feet below existing burnt crossarms.
  - d. Transfer/lower, keeping in the same pole arrangement, all reusable materials (wiring, insulators, hardware, etc...) that are presently attached to the top 12 feet of this power-pole structure to a location approximately 12 feet below where they presently exist. Consisting of:
    - 1) Guy wires
      - Both "W" type guy wires (7/16"EHS), between poles (15 ft. long), and associated hardware.
      - Both outside poles' "X", "Y", & "Z" guy wires, and associated hardware.
      - Inside pole "X" guy wires, and associated hardware.
    - 2) Two sets (two insulators/set) of upstream powerlines' pin-type insulators, and associated jumper-wires, wire-wraps, and fittings. The downed line's set of pin-insulator brackets, if reusable.  
NOTE: After each bracket is vertically plumbed, install an additional ½" lag screw into the bottom hole of each pin-type insulator support bracket (there must be a minimum of one through-bolt and one lag screw in each insulator support bracket.).
    - 3) Both sets (both sides of the pole) of overhead neutral/shield wires, and associated hardware.
    - 4) Both sets (both sides of the pole) of upstream overhead powerline conductors, and associated hardware.
  - e. Remove existing two burnt crossarms, and give to NVEC.
  - f. Angle-cut (at approximately 15° from horizontal) approximately the top twelve(12') feet from the structure's two undamaged poles, and then similarly angle-cut the remaining damaged pole to match the height of the two previous shortened poles. Treat/coat cut pole tops with a "pole-cap" type of coating. Coating should be a thickness of not less than ¼".
  - g. Replace downed powerline's hardware on both sides of pole's crossarms. Replace the powerline's two broken pin-type insulators, and if undamaged reuse their existing support brackets.  
NOTE: As with the previously reinstalled insulator support brackets, after the bracket is vertically plumbed install an additional ½" lag screw into the bottom hole of each pin-type insulator

- support bracket (there must be a minimum of one bolt and one lag screw in each insulator support bracket.).
- h. Replace downed conductor, string new #1/0 ACSR conductor across river, between the Left and Right Bank pole structures.
- i. Adjust new powerline phase conductor to same elevation (final-sag/slack) of other two existing powerline phases' final-sag/slack elevation.
- j. Install new line's terminations (barrel compression fittings), and attach both ends of the line to their respective pole structure suspension insulators.
- k. Install new line's associated jumper/crossover-wires, wire-wraps, and fittings across crossarm pin-type insulators and phase line.
- l. All unused holes in both the poles and crossarms shall be treated with wood preservative and plugged with tight fitting cedar plugs.
- m. Pole length indication on manufacturer's brand or tag shall be obliterated, and the new pole's new/shorter length shall be indicated.
- n. Verify all ground, neutral, and phase conductors are properly terminated.

2. Left Bank Power-pole Structure Work (Reference attached Drawing #2)

The scope of work for this bank is to lower the existing three(3) 10KVA (possibly 15KVA), 7KV<sub>L-N</sub>-277V<sub>L-N</sub>, single-phase, wye-connected, pole-mounted distribution transformers with their associated cutouts, and lightning arresters, to a location on each pole that is approximately 25 feet above ground level.

Contractor shall:

- a. Obtain a work safety clearance on the power line from the utility (NVEC) providing power to this structure.
- b. On each pole structure, relocate/lower transformers existing ¾" secondary-service entrance conduit with two #8 AWG 600V cables inside the conduit, to position approximately 20 feet from the ground. For both 600V cables, at least ten feet (10') of cable should extend outside each conduit's lowered weather-head. This cable slack will be needed later when the pole-transformer is relocated nearby.
- c. Verify that the powerline pin-type insulators, and associated jumper-wires, wire-wraps, and fittings are properly positioned.

NOTE: As with previously reinstalled insulator support brackets on the Right Bank, if only one bolt is holding the bracket, vertically plumb the bracket and install an additional ½" lag screw into the bottom hole of the pin-type insulator support bracket (there must be a minimum of one bolt and one lag screw in each insulator support bracket.).

- d. At each pole structure, relocate each existing pole-transformer, with its associated cutout and lightning arrester, from their present pole locations, to a lower position on the pole. Each pole-transformer shall be relocated on its pole to a position where the top of the transformer can is approximately 23 feet above ground level. Mount each transformer's associated cutout and arrester just above the transformer at a position approximately 25 feet from ground level.
- e. At each pole, extend a #4 AWG hard-drawn copper neutral conductor from the neutral/shield wire, at the top of the pole, to each pole-transformer's H2 high-side bushing. Secure/staple the neutral/ground wire along the side of each pole using staples at approximately five-foot intervals.
- f. At each pole structure, install new 1-1/2" primary-service conduit (rigid galvanized-steel with insulated conduit bushing fitting) from the top of pole (just below the top crossarms) to within approximately 3 feet above the transformer's new location.
- g. At each pole, install approximately 60 feet of new #2 AWG AL. 15KV insulated primary-service cable inside the new 1-1/2" conduit that's located between the upper and lower cross arms. Approximately 10 feet of cable should extend out of both ends of the conduit. Terminate top-section of #2 AWG AL. 15KV cable to its associated overhead power line. Terminate the lower-section of 15KV cable to the top of its associated arrester, and install a #2 AWG AL. 15KV cable jumper from the top of the arrester to the top of its associated cutout.

NOTE: Approximately 250 feet of #2 AWG AL. 15KV insulated cable and terminators will be provided by NVEC and installed by Contractor.

- h. At each pole, terminate a #2 AWG AL. 15KV cable from the bottom of each cutout to its associated transformer's high-side, "H1", bushing.

- i. At each pole, reconnect the 600V cables, installed in item "b" above, to the transformer's low-side bushings. Connect the black-colored cable to the "X1" bushing, and connect the white-colored cable to the "X2" bushing.
- j. Using #4 AWG bare solid-copper wire, connect the bottom of each arrester to the neutral/ground wire.
- k. Install a ground-wire molding on each pole to cover pole's ground wire at each pole's transformer/cutout/arrester location.
- l. Plug all unused holes in the poles and crossarms with tight fitting cedar plugs.
- m. Verify all ground, neutral, and phase conductors are properly terminated.

(d) Inspection/Acceptance. The Contractor shall tender for acceptance only those items that conform to the requirements of this contract. The Government reserves the right to inspect or test any supplies or services that have been tendered for acceptance. The Government may require repair or replacement of nonconforming supplies or reperformance of nonconforming services at no increase in contract price. The Government must exercise its postacceptance rights--

(1) Within a reasonable period of time after the defect was discovered or should have been discovered; and

(2) Before any substantial change occurs in the condition of the item, unless the change is due to the defect in the item.

(e) Excusable delays. The Contractor shall be liable for default unless nonperformance is caused by an occurrence beyond the reasonable control of the Contractor and without its fault or negligence, such as acts of God or the public enemy, acts of the Government in either its sovereign or contractual capacity, fires, floods, epidemics, quarantine restrictions, strikes, unusually severe weather, and delays of common carriers. The Contractor shall notify the Contracting Officer in writing as soon as it is reasonably possible after the commencement of any excusable delay, setting forth the full particulars in connection therewith, shall remedy such occurrence with all reasonable dispatch, and shall promptly give written notice to the Contracting Officer of the cessation of such occurrence.

(f) Termination for the Government's convenience. The Government reserves the right to terminate this contract, or any part hereof, for its sole convenience. Subject to the terms of this contract, the Contractor shall be paid a percentage of the contract price reflecting the percentage of

the work performed prior to the notice of termination, plus reasonable charges that the Contractor can demonstrate to the satisfaction of the Government, using its standard record keeping system, have resulted from the termination. The Contractor shall not be required to comply with the cost accounting standards or contract cost principles for this purpose. This paragraph does not give the Government any right to audit the Contractor's records. The Contractor shall not be paid for any work performed or costs incurred that reasonably could have been avoided.

(g) Termination for cause. The Government may terminate this contract, or any part hereof, for cause in the event of any default by the Contractor, or if the Contractor fails to comply with any contract terms and conditions, or fails to provide the Government, upon request, with adequate assurances of future performance. In the event of termination for cause, the Government shall not be liable to the Contractor for any amount for supplies or services not accepted, and the Contractor shall be liable to the Government for any and all rights and remedies provided by law. If it is determined that the Government improperly terminated this contract for default, such termination shall be deemed a termination for convenience.

(c) The submission of the payment protection is required within 5 calendar days of contract award.

(d) The payment protection shall provide protection for the full contract performance period plus a one-year period.

(e) Except for escrow agreements and payment bonds, which provide their own protection procedures, the Contracting Officer is authorized to access funds under the payment protection when it has been alleged in writing by a supplier of labor or material that a nonpayment has occurred, and to withhold such funds pending resolution by administrative or judicial proceedings or mutual agreement of the parties.

(f) When a tripartite escrow agreement is used, the Contractor shall utilize only suppliers of labor and material that signed the escrow agreement.

(End of clause)

#### 52.236-1 PERFORMANCE OF WORK BY THE CONTRACTOR (APR 1984)

The Contractor shall perform on the site, and with its own organization, work equivalent to at least one hundred (100%) percent of the total amount of work to be performed under the contract. This percentage may be reduced by a supplemental agreement to this contract if, during performing the work, the Contractor requests a reduction and the Contracting Officer determines that the reduction would be to the advantage of the Government.

#### WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- \* an existing published wage determination
- \* a survey underlying a wage determination
- \* a Wage and Hour Division letter setting forth a position on a wage determination matter
- \* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations  
Wage and Hour Division  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.
